² Unigestion ESG Scores (stock level) are proprietary scores on a scale of 0 to 100 (worst to best).

³ Negative (positive) trend indicates downgrade (upgrade) in ESG score. If no noteworthy change, the trend is considered to be stable. Portfolio ESG trend is computed on position weight basis.

Company level involvement in the business activity is the share of revenue made from said business activity. The total levels for each involvement are the weighted averages of involvement levels in percentage of revenue and weight of the portfolio or benchmark. Exposure levels below 10% of revenue share are treated as insignificant.

Detailed exposures for Tobacco and Oil & Gas show the weighted averages of revenue share and do not take into account the 10% revenue threshold.

Exclusions

Our Responsible Investment Policy considers two pillars of bottom-up considerations:

Pillar I: Norm-Based Screening

Exclude companies associated with key social or environmental issues. According to the European Sustainable Investment Forum, it is the “screening of investments according to their compliance with international standards

Pillar II: Exclusionary Screening

Exclude companies from an investment universe based on our expectations regarding specific ESG-related risks.

FUND SPECIFIC ESG OBJECTIVES

FUND SPECIFIC ESG OBJECTIVES

Environmental Performance

The fund has additional ESG objectives.

The fund monitors and provides information on other sustainability performance objectives considered as follows:

- Improve GHG Intensity (tCO2e/USD m revenues). This metric includes Scope1, Scope2 and Scope3.

Action:

Maintain a GHG Intensity that is at least 20% lower than that of the market reference.

We exclude companies with excessive GHG Intensity (10'000 tCO2e/USD m revenues), unless their temperature alignment is below 2 degrees.

Engage directly with companies and participate in collaborative engagement initiatives to promote carbon emissions disclosure and setting/monitoring of emissions reductions targets.

FUND SPECIFIC ESG OBJECTIVES

Social Performance

- Improve Fairness ratio (Average Executive Pay as Percent Average Personnel Expense)
- Reduce severity of Employee incidents/controversies (Controversy range is from 0 to 5, 5 is the most severe controversy)

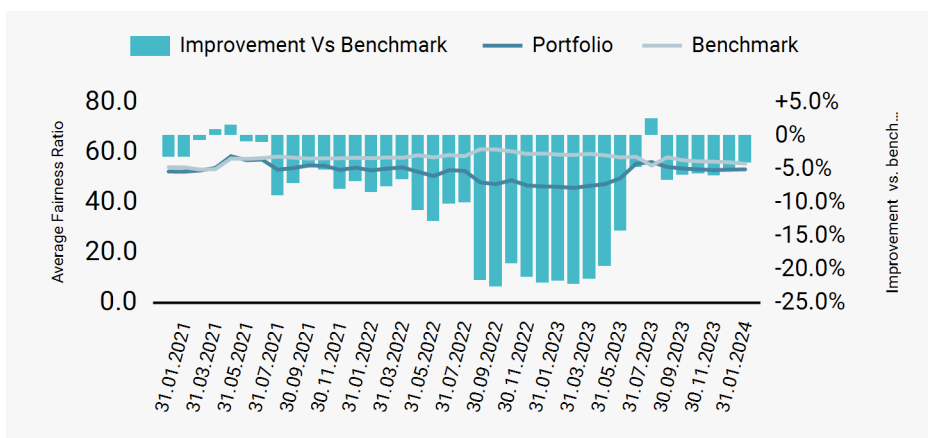

Action:

Aim to have an average fairness ratio that is better than that of the market reference, or the proportion of the portfolio allocated to the worst decile below the market reference weight.

Aim to have an average incident controversy score that is better than the that of market reference.

Companies with a fairness ratio in the worst decile of the universe or with considerable employee incidents controversies will be reviewed as potential engagement cases on those topics.

FUND SPECIFIC ESG OBJECTIVES

Governance Considerations

- Improve Independence of boards.

According to Sustainability Policy Recommendations obtained from ISS, the boards of ``Non-controlled`` companies are expected to comprise of over 50 percent independent members (excluding employee shareholder representatives), while ``Controlled`` companies are expected to comprise of at least one-third independent board members (some exceptions may apply in different countries. For these we follow ISS recommendations).

Action:

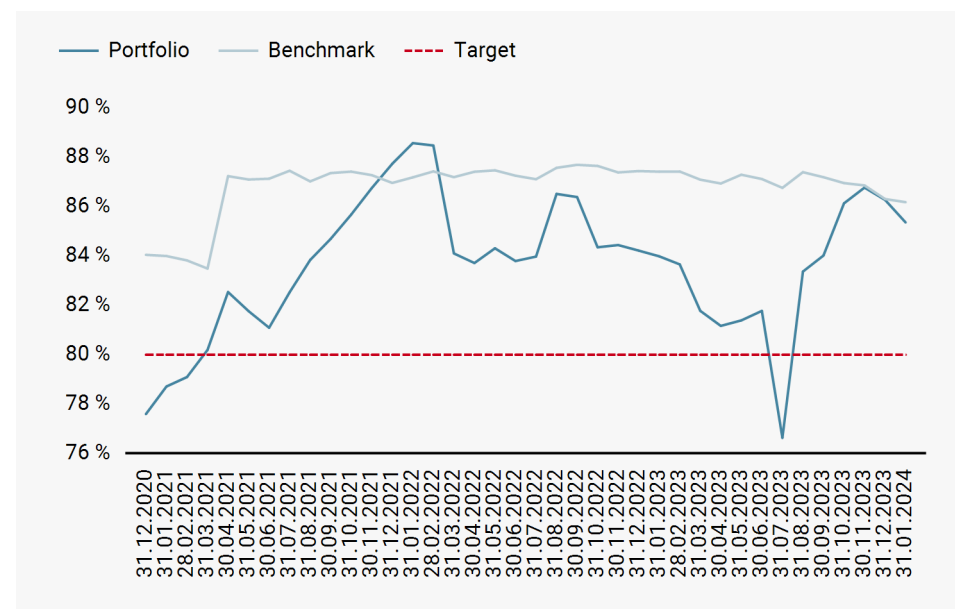

Aim to have at least 80% of the portfolio invested in companies with at least 50% of independent board members.

Companies with a lower level of board independence than described above will be reviewed as potential engagement cases. Unigestion systematically votes against the appointment of directors which prevents the achievement of a sufficient board independence level as described above.

FUND SPECIFIC ESG OBJECTIVES

Human Rights Considerations

- Enhance practices of companies towards Human Rights and reduce severity of controversies concerning human rights (Controversy range is from 0 to 5, 5 is the most severe controversy)

Action:

Exclude companies that are considered non-compliant according to UNGC principles.

Seek to allocate a lower portion of the portfolio weight to companies in Breach or on the WatchList than the market reference portion.

Aim to have an average human rights controversy score lower than the market reference.

Target for engagement, Companies that are put on WatchList for UNGC compliance to have more clarity on the issue raised, and enquire about and monitor the measures taken and the progress achieved to warrant removal from the WatchList. Companies with considerable human rights controversies will be reviewed as potential engagement cases.

Current Emissions

CURRENT EMISSIONS

Introduction

The aim of this section is to assess the carbon performance of the portfolio. Firstly, the greenhouse gas (GHG) emissions held within the portfolio are quantified. This is done by apportioning company level GHG emissions to portfolio by ownership. In other words, if the portfolio holds x% of a company, it also holds x% of its emissions. Compared to using pure weights, this computation method paints a more accurate picture of portfolio emissions. To enable cross-company comparison in terms of emissions, GHG intensity is also presented. This metric counts GHG emissions as a multiple of revenue, correcting for possible company size bias.

Emissions are quoted in tonnes of CO2 equivalents (tCO2e) and apportioned by ownership. Ownership is the ratio of value of holdings to market capitalization or enterprise value. Emissions include scopes 1, 2 and 3 (upstream and downstream).

Scope 1 emissions for a company are considered to be estimated when they are not disclosed and therefore have to be modelled.

GHG intensity is the total scopes 1, 2 and 3 (upstream and downstream) emissions normalized by company revenues and then aggregated using weighted-average carbon intensity (WACI) method (sums product of each holding's weight with the company level GHG Intensity).

Relative efficiency refers to the efficiency of portfolio versus the benchmark in terms of GHG intensity ($Relative\ Efficiency = 1 - (Portfolio\ GHG\ Intensity) / (Benchmark\ GHG\ Intensity)$)

Best (worst) performers in terms of contribution to portfolio GHG intensity, where GHG intensity is aggregated on the basis of ownership. Stocks are ranked from best to worst in terms of their contribution, where higher contribution corresponds to worse performance. GHG Intensity Contribution is quoted as the decrease in portfolio GHG intensity in case of full divestment from the stock.

Fossil Fuels

FOSSIL FUELS

Fossil Fuels Related Activities

¹ Portfolio exposure to revenues from fossil fuel related activities, where exposure is computed based on weight. Three categories of fossil fuel activities: Generation, Extraction and Others. Others include distribution, refinement, pipeline transportation, drilling of wells and fossil fuel supporting activities. Company level exposure (bar height) is the level of exposure to companies involved in fossil fuel related activities in terms of their total weight in the portfolio or benchmark. The remaining sections of the bars indicate weighted average revenue exposure to indicated activity.

Energy Generation Mix⁴ (% of Total GWh)

¹ Compares portfolio's exposure to 'brown' and 'green' energy related revenues on the basis of weight. Nuclear energy is categorized as other. Total energy exposure (bar height) indicates the total weight in the portfolio/benchmark of companies with energy-related revenues. The remaining sections of the bars indicate the weighted average revenue exposure to indicated energy category.

² Warming level of the portfolio. Carbon (under)/over indicates how much the portfolio is above or below the emission budget linked to 2°C scenario (in tonnes of carbon and proportion of total carbon budget of portfolio). Tonnes Carbon (under) or over 2°C /mInvested (during 10-15 years) within -50 to 50 is assumed as insignificant and therefore equivalent to 0, due to sensitivity of the subject to quantitative measurements.

³ Revenue exposure to 'green' activities grouped into 9 categories. Exposure is computed using company revenue share generated by 'green' activities and apportioned by portfolio weight.

⁴ Compares energy generation mix in GWh apportioned on ownership basis.

Best (worst) performers in terms of physical risk using raw and sensitivity adjusted composite physical risk scores.

- Composite score is the raw composite physical risk score of the company without sensitivity adjustment. Composite indicates aggregation of the 8 physical risk types (Coast Floods, Extreme Cold, etc.). At company level, raw physical risk scores (composite) are on a scale of 0 to 100 (lowest to highest).

- Adjusted composite is the raw composite physical risk score adjusted for company sensitivity to physical risk.

- Data quality indicates the quality of data used to determine physical risk score at company level. There are two levels: A and B, where A indicates higher quality.

- Asset count indicates the number of assets assessed at company level to determine company exposure to physical risk. In absence of asset level data, physical risk exposure is determined based on HQ location and revenue share by country, rather than location of assets.

Contribution to portfolio physical risk score is computed on the basis of ownership and is quoted as the basis point decrease in physical risk exposure for the portfolio in the event of full divestment from the stock.
