¹ Unigestion ESG Score (stock level) is a proprietary computation shown in percentile (10 is the best, 0 being the worst). The score is aggregated based on position weight.

² Negative (positive) trend indicates downgrade (upgrade) in ESG score. If no noteworthy change, the trend is considered to be stable. Portfolio ESG trend is computed on position weight basis.

Portfolio refers to Unigestion Swiss Equities while **Benchmark** refers to Swiss Performance Index.

Exclusions

Our Responsible Investment Policy considers two pillars of bottom-up considerations:

Pillar I: Norm-Based Screening

Exclude companies associated with key social or environmental issues. According to the European Sustainable Investment Forum, it is the “screening of investments according to their compliance with international standards

Pillar II: Exclusionary Screening

Exclude companies from an investment universe based on our expectations regarding specific ESG-related risks.

Current Emissions

CURRENT EMISSIONS

Introduction

The aim of this section is to assess the carbon performance of the portfolio. Firstly, the greenhouse gas (GHG) emissions held within the portfolio are quantified. This is done by apportioning company level GHG emissions to portfolio by ownership. In other words, if the portfolio holds x% of a company, it also holds x% of its emissions. Compared to using pure weights, this computation method paints a more accurate picture of portfolio emissions. To enable cross-company comparison in terms of emissions, GHG intensity is also presented. This metric counts GHG emissions as a multiple of revenue, correcting for possible company size bias.

Emissions are quoted in tonnes of CO2 equivalents (tCO2e) and apportioned by ownership. Ownership is the ratio of value of holdings to market capitalization or enterprise value. Emissions include scopes 1, 2 and 3 (upstream and downstream).

Scope 1 emissions for a company are considered to be estimated when they are not disclosed and therefore have to be modelled.

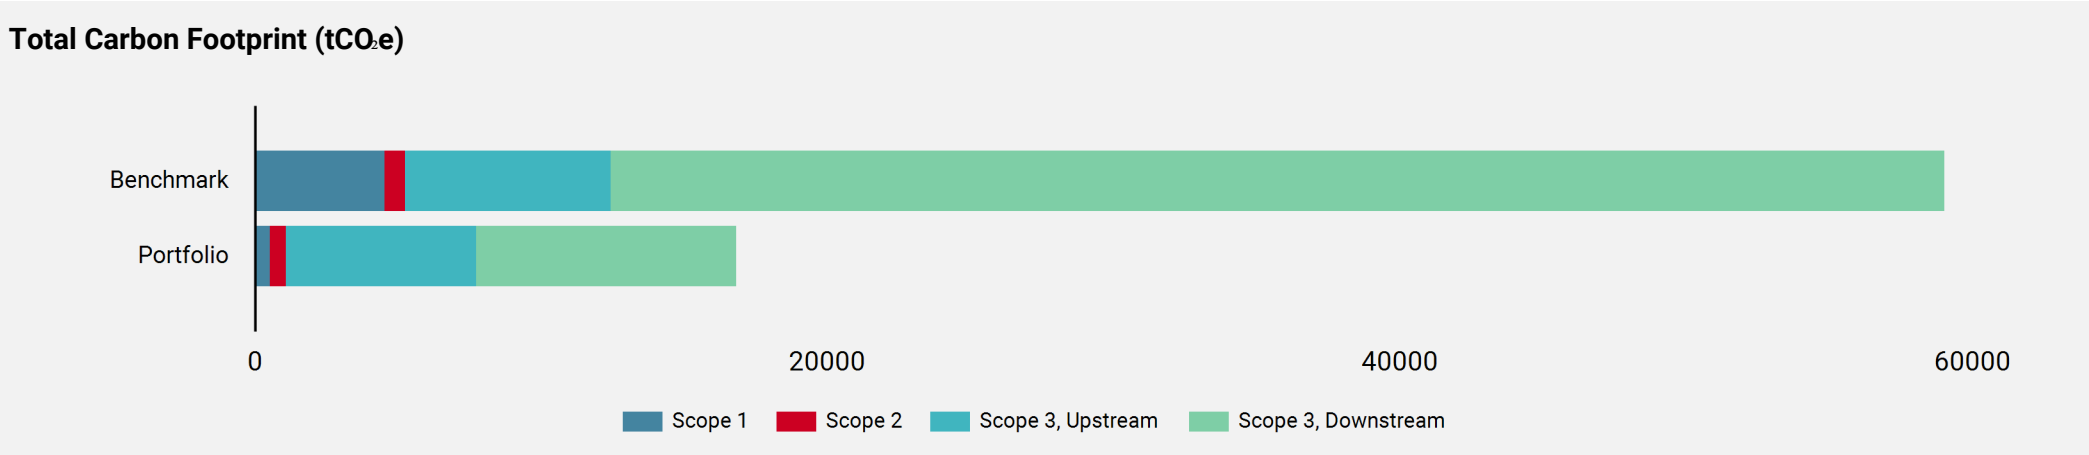

GHG intensity is the total scopes 1, 2 and 3 (upstream and downstream) emissions normalized by company revenues and then aggregated using weighted-average carbon intensity (WACI) method (sums product of each holding's weight with the company level GHG Intensity).

Relative efficiency refers to the efficiency of portfolio versus the benchmark in terms of GHG intensity ($Relative\ Efficiency = 1 - (Portfolio\ GHG\ Intensity) / (Benchmark\ GHG\ Intensity)$)

GHG EMISSIONS

The following chart shows the value-based weight of each GICS sector in the portfolio, in comparison to the contribution of the sector to portfolio GHG

Value-based weight is the weight based on ownership within a company.

To estimate carbon contribution, total emission intensity, scopes 1, 2 and 3 (upstream and downstream) are used.

The contribution is estimated on ownership basis.

Best (worst) performers in terms of contribution to portfolio GHG intensity, where GHG intensity is aggregated on the basis of ownership. Stocks are ranked from best to worst in terms of their contribution, where higher contribution corresponds to worse performance. GHG Intensity Contribution is quoted as the decrease in portfolio GHG intensity in case of full divestment from the stock.

¹ Ownership weight indicates the ownership-based weight in the portfolio.

² Carbon weight indicates the GHG intensity share as a percentage of portfolio GHG intensity

Fossil Fuels

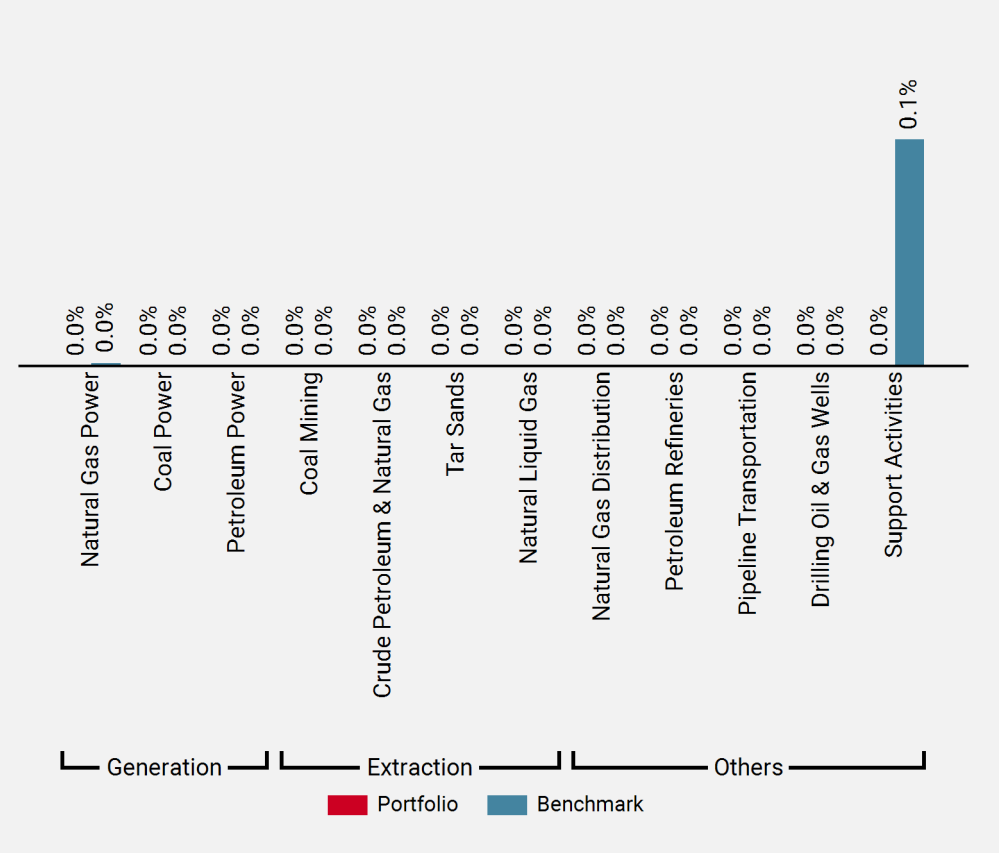

FOSSIL FUELS

Fossil Fuels Related Activities

Fossil Fuels Activities by Revenues¹ (%)

Fossil Fuels Revenues by Industry

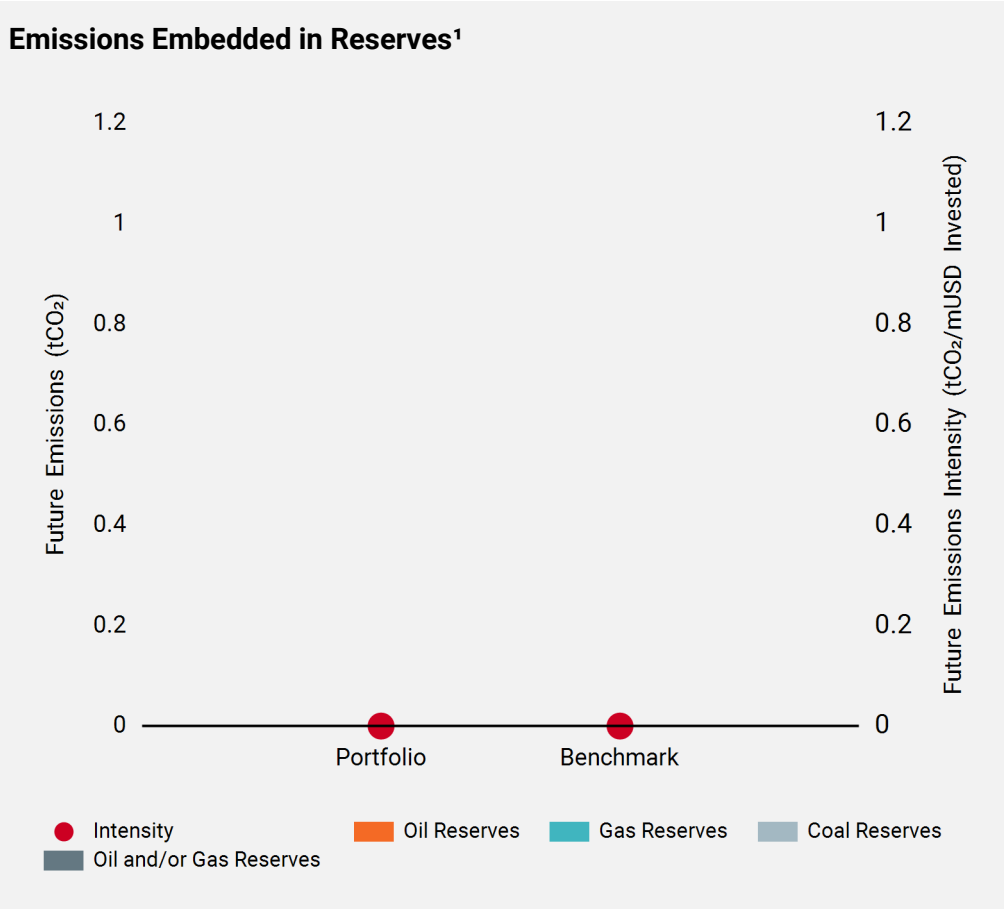

¹ Portfolio exposure to revenues from fossil fuel related activities, where exposure is computed based on weight. Three categories of fossil fuel activities: Generation, Extraction and Others. Others include distribution, refinement, pipeline transportation, drilling of wells and fossil fuel supporting activities. Company level exposure (bar height) is the level of exposure to companies involved in fossil fuel related activities in terms of their total weight in the portfolio or benchmark. The remaining sections of the bars indicate weighted average revenue exposure to indicated activity.

Emissions Pathway Assessment

Warming Level

2-3°C

Tonnes Carbon (Under)/Over	846
Percent of Total (Under)/Over	7.23%
Carbon/mInvested (Under)/Over	8

Warming level is determined on whether portfolio emissions are above or below the emission budgets linked to different warming scenarios, such as 2°C.

Above emission metrics are in reference to the 2°C budget.

¹ Combination of historical and forward-looking emission data. Dashed line shows the 2°C compatible emission trajectory. Assessment on whether portfolio emissions are above or below the emission budget linked to warming scenario of 2°C.

TEMPERATURE ASSESSMENT

'Brown' and 'Green' Revenues

¹ Compares portfolio's exposure to 'brown' and 'green' energy related revenues on the basis of weight. Nuclear energy is categorized as other. Total energy exposure (bar height) indicates the total weight in the portfolio/benchmark of companies with energy-related revenues. The remaining sections of the bars indicate the weighted average revenue exposure to indicated energy category.

² Revenue exposure to 'green' activities grouped into 8 categories. Exposure is computed using company revenue share generated by 'green' activities and apportioned by portfolio weight.

³ Compares energy generation mix in GWh apportioned on ownership basis.

Portfolio refers to Unigestion Swiss Equities while **Benchmark** refers to Swiss Performance Index.

¹ Physical Risk Score is a sensitivity adjusted physical risk score that incorporates an adjustment for the expected sensitivity of each company to each form of physical risk. Level of risk aggregated on ownership. The aggregate sensitivity adjusted physical risk exposure is computed for all years and scenarios. High scenario corresponds to RCP 8.5, moderate is RCP 4.5 and low is RCP 2.6.

² Based on the sensitivity adjusted score. At company level, physical risk exposure indicators are on a scale of 0 to 100, from lowest to highest under a high warming scenario (RCP 8.5).

Best (worst) performers in terms of physical risk using raw and sensitivity adjusted composite physical risk scores.

- Composite score is the raw composite physical risk score of the company without sensitivity adjustment. Composite indicates aggregation of the 7 physical risk types (coastal floods, coldwaves etc.). At company level, raw physical risk scores (composite) are on a scale of 0 to 100 (lowest to highest).
- Adjusted composite is the raw composite physical risk score adjusted for company sensitivity to physical risk.
- Data quality indicates the quality of data used to determine physical risk score at company level. There are two levels: A and B, where A indicates higher quality.
- Asset count indicates the number of assets assessed at company level to determine company exposure to physical risk. In absence of asset level data, physical risk exposure is determined based on HQ location and revenue share by country, rather than location of assets.

Contribution to portfolio physical risk score is computed on the basis of ownership and is quoted as the basis point decrease in physical risk exposure for the portfolio in the event of full divestment from the stock.

ENGAGEMENT

Year	Company	Engagement Status	Voting Script	Company Reply
2021	DKSH HOLDING AG	Ongoing dialog, conference call with be/was scheduled	Election of members of the Nomination and Compensation Committee	Company replied with different view of independence than ISS and therefore count both nominees as independent. We will schedule a call after the AGM.
2021	HUBER & SUHNER AG	Satisfactory explanation, discussion closed	Election of Members of the Compensation and Nomination Committee, due to level of independence and overboarding.	Company confirmed our considerations were passed onto the Chairman of the Board. The Board will take our recommendations into consideration, whilst evaluating the composition of the NCC-Committee proposal for the AGM 2022. Regarding excessive board mandates, company confirmed that Mr. Kaufmann does not stand for reelection regarding the Gurit Holding board membership in April 2021.
2021	INFICON HOLDING AG	Satisfactory explanation, discussion closed	Amend Articles of Association to provide virtual-only meetings on a permanent basis.	Company replied with concrete explanations to our concerns and confirmed the amendments leave the possibility to organize partially virtual meetings whereby shareholders would also be able to attend in person. No further call needed.
2021	Nestle	Satisfactory explanation, discussion closed	Follow-up to the Engagement Call of June 2020: we would like to review the progress the company has made in specific social issues related to child labour incidents in the supply chain, as well as the topics of palm oil and deforestation.	We had a call with company experts on November 12. Company explained the Cocoa Plan Project and how the it is helping children toward a better life, and trying to reach the expected success rate. The primary KPI agreed upon is to have 95% of cocoa sourced from the Nestlé Cocoa Plan by 2025 (vs. 46.5% in 2020) with little improvement noted over the past three years. We agreed to discuss their progress at the next release of their Cocoa Plan Report.
2020	Nestle	Satisfactory explanation, discussion closed	Concerns about persistent labour and human rights issues in the company's suppliers' palm oil and cocoa plantations, including child labour cases.	We scheduled a call with company experts who gave concrete arguments and explained the different challenges the company faces in addressing child labour. We also discussed deforestation zones and palm oil plantations as well as other commodities they are able to monitor. We consider this dialogue as a satisfactory explanation to our concerns.
