# UNI-GLOBAL - DEFENSIVE EUROPEAN EQUITIES IA-EUR

Fund of the part I Luxembourg SICAV, Uni-Global, UCITS compliant

## MARKET COMMENT (BASED ON THE SICAV REFERENCE CURRENCY)

In March, European equity markets were heavily down under the pressure of key geopolitical developments. While Germany's decision to significantly invest in defense and infrastructure was a major positive catalyst, creating positive investor sentiment and marking a shift from its traditionally conservative fiscal policies, we saw international markets experienced significant turbulence due to several factors. U.S. equities were pressured by economic uncertainties, rising Treasury yields, and inflation concerns, largely stemming from tariffs. President Trump's automotive sector tariffs had a negative impact, affecting global investor confidence. However, the Federal Reserve's decision to maintain interest rates provided some stability, despite ongoing inflation worries. The Uni-Global - Defensive European Equities portfolio showed resilience, declining by only 0.4% compared to the benchmark's 4.0% drop. This 3.6% outperformance was driven by strategic sector allocations and effective stock selections. The best performing sector was Utilities, with a 9.5% outperformance, benefiting from their defensive nature, leveraging stable cash flows and regulatory support in uncertain times. The worst performing sector was Consumer Durables, which underperformed by 12.5% due to sensitivity to economic instability and tariff impacts, affecting outlook for costs and consumer demand. The best performing country was Norway, with an 11.0% outperformance, with gains thanks to strong energy sector performance and healthy economic indicators. The worst performing country was Denmark, which faced a 14.2% underperformance, affected by its reliance on exports amid global trade tensions, impacting earnings forecasts and rising diplomatic tensions with the US over Greenland. The portfolio's low volatility focus provided effective stability against market turbulence. So did our small positive exposure to Value. However, our overweight to Quality was a small drag due to interest rate concerns and slower growth forecasts. As regards performance attribution by Sector, the best allocation effect comes from our underweight in Consumer Durables. The worst allocation effect is our underweight Capital Goods, with many stocks uninvestable by our strategy because of their controversial weapons exposure. The best selection effect is to be found in Pharmaceuticals as we underweight Novo Nordisk significantly. The worst selection effect is in Household Products, hit by consumer spending uncertainties in the US. Country wise, the best allocation effect is our underweight in Denmark. The worst allocation effect is our Underweight in the United Kingdom. The best selection effect is in Switzerland while the worst selection effect is in the United Kingdom (-0.40%), with negative sentiment affecting our position in Tesco. Overall, the portfolio outperformed the benchmark through positive sector allocation and solid stock selection. The emphasis on defensive positions and low volatility factors provided meaningful protection against broader market declines.
