MARKET COMMENT (BASED ON THE SICAV REFERENCE CURRENCY)

In January 2025, global markets were heavily influenced by notable economic and political developments. The anticipation of U.S. President Donald Trump's inauguration for a second term drew significant attention, with events like the decline of the U.S. dollar and Bitcoin reaching record highs above \$109,000 captivating investors. Early in the month, a surprising slowdown in U.S. core inflation sparked optimism, pushing equity indices higher with the hope of easing inflationary pressures. However, this optimism was tempered by a sharp decline in U.S. equities towards the period's end, following disappointing economic reports that dampened expectations for imminent interest rate cuts and the mini tech crash which followed the emergence of a new player in the AI competitive field: DeepSeek, which challenged current lofty valuations in the field. Internationally, while equity indices within the MSCI AC World Index showed varied results, overall economic optimism buoyed the composite index towards a net gain. In Asia, the appointment of a new RBI chief in India prompted debates about the rupee's exchange rate policy amid a strong dollar. Sector wise, the Health Care sector was the top performer in the index, with a strong relative performance of 5.5%. In contrast, the Semiconductors sector faced challenges driven by the DeepSeek mini crash, recording a -6.8% relative performance decline. Country wise, Colombia stood out as the best performing country, boasting a significant 16.7% outperformance, fuelled by robust commodity prices and advantageous trade policies. In contrast, the Philippines struggled, posting the largest lag at -13.0%. US behaved in line, while many European countries outperformed (Germany, Italy, Spain). Style wise, during the month, the low volatility strategy aligned well with the portfolio's defensive nature, with a positive return despite the positive markets. Value factor was the best one while Quality factor saw a small lag. In terms of performance attribution, the underweight to Semiconductors added positively with a 0.6% allocation effect; however, overweight Technology showed a negative allocation impact of -0.4%. Nonetheless, within Technology, selection contributed a positive effect of 0.5%, while Banks selection was weaker at -0.3%. By country, overweight to Switzerland yielded a 0.2% benefit, whereas underweight to France posed challenges, resulting in a -0.1% effect. Selection decisions in France provided a small positive contribution of 0.1%, while those in the U.S. negatively impacted performance by -0.6%. At stock level, the absence in NVIDIA was a standout, adding 0.6% to returns, as the stock lost 11% over the period. Conversely, the absence in Meta Platforms (A) detracted -0.2% as the stock rallied 18bps over the month. The Uni-Global - Defensive World Equities portfolio achieved a return of 2.8%, falling short of its benchmark—the MSCI AC World Daily TR Net USD—which gained 3.4%. The relative underperformance of -0.6% was mainly due to sector allocation decision in Media and less favourable selection in the US. Overall, the portfolio behaved in line with expectations, with the strong up markets creating a significant lag, partly recovered during the mini Tech crash. Going forward this highlight the need to properly manage the risk of stretched valuation in US stocks, in particular with the Tech sector.
