MANAGEMENT COMMENT BASED ON THE MAIN SHARE CLASS

April ended the long streak of positive months for global equity markets that had started in November 2023. The month began with increased geopolitical tension in the Middle East, after the Israeli airstrike on the Iranian embassy in Syria on April 1, and the counter-strike from Tehran, on April 14. Consequently, the oil price ended up over the \$90 a barrel level once again, while major global equity markets were all down around 3%. Fortunately, the situation didn't escalate further and a fragile calm was restored during the second half of the month. In the second half of the month, markets were more focused on economics, inflation and – once again – central bank policies. The lower quarter on quarter US GDP and higher inflation numbers led investors to worry that the Fed's monetary policy may not have been as effective as planned. Prospects for rate cuts have been deferred, putting additional pressure on equity markets.

The defensive nature of the Swiss market, together with the rate cut implemented by the SNB at the end of March, mitigating slightly the drawdown of the Swiss equity market. The SPI ended the month down 1.63% while the SMI experienced a total return of -1.31%. From a sector standpoint we observed the highly negative performance of the Technology sector, which fell 11%, with Logitech alone dropping 10.5%. Consumer Discretionary stocks fell 7%, with Richemont and Swatch down 6% and 5.5% respectively, while Financials slipped 6.8% as UBS lost more than 10% and Swiss Re fell 8% during the month. Finally, Barry Callebaut rose 15%, benefitting from the sharp decrease in the cocoa price, after twelve challenging months.

In April, the fund decreased by 2.36%, slightly outperforming its benchmark by 8bp. The Swiss Performance Index decreased by -2.44%. The fund records a positive YTD performance of 1.53%, underperforming its benchmark by 187bp.

From an industry groups point of view, the selection effect was supportive while the allocation detracted from relative performance. Our stock picking in Insurance (21bp) and Financial Services (17bp) particularly benefited to the strategy. By contrast, the selection in Banks (-16bp) was detrimental. In terms of allocation, the overweight in Insurance (-15bp) and underexposure to Capital Goods (-14bp) detracted the most. Conversely, the overweight in Real Estate (10bp) and Banks (10bp) was advantageous.

With a positive impact of 17bp, the underweight in the UBS bank, was the top contributor to excess returns. With a negative contribution of -22bp, the underexposure to ABB, a company operating in the Capital Goods industry, was the largest detractor.
